Methodology Overview

- The size indices seek to measure the large, mid and small-cap segments of the Indian equity market.
- The size splits are based on cumulative average daily total market capitalization of the companies in the BSE AllCap sorted in descending order. The companies with average daily total market capitalization accumulated to 70% are large-cap, the next 15% are mid-cap and the final 15% are small-cap.

All information presented prior to Index launch date is back tested. Back tested performance is not actual performance but is hypothetical. The back-test calculations are based on the same methodology that was in effect on the index Launch Date. However, when creating back-tested history for certain periods, index methodology rules may be relaxed to capture a large enough universe of securities to simulate the target market that the index is designed to measure. Relaxation in rules may include but are not limited to changes to Stock inclusion criteria, buffer rules, capping and number of constituents. Past performance of an Index is no indication of future results.
